We released two new updates in the last two days to add some new features and fix some minor bugs to both Total War Battle System and Total War Lite. Fixing one of those bugs requires we have to prevent version prior 1259 from working. When trying to equip TWBS or TWL with version release prior 1259 you'll see a message displaying in chat and over your head with an "Out of Date" message. Simply equip the new version sent to you by Total War update server to be back playing again.
